

## The Provenza Greenwood Collection

The Provenza Greenwood Collection was created with a patented combination of a color and pressure injection technology to create beautiful wood flooring that provides quality and durability while allowing the treasures of the natural characteristics of the wood to enhance the warmth and style in a residential or commercial setting.

Provenza Greenwood is organically enhanced to increase the density and hardness. Natural plant derivatives are used to accentuate the characteristics and natural beauty in the wood. Our environmentally friendly floors have been systematically harvested on a plantation and are certified sustainable materials by the Forest Steward Council.

With our patented impregnated process, the inherent personality of the wood simply cannot be replicated by any surface staining or production finishing techniques. Provenza Greenwood is available in solid or engineered construction and is offered in many sophisticated, warm tones to compliment a variety of design applications.
