

## WearMax Ceramic Finish

From Outer Space Comes the Most Wear-Resistant Floor Finish On the Planet

WEARMAX is a space-age ceramic finish representing a dramatic leap forward in wear resistance technology. The most durable wood floor finish on the planet. WEARMAX is based on the same materials used for the ceramic nose shield protecting NASA

The Patented WearMax technology provides a floor finish that will look good for a long time. How does WearMax achieve that? WearMax technology is a coating system that prevents you from walking on the floor finish.

WEARMAX contains large amounts of ceramic particles, which protrude through the final surface. These ceramic particles are what you walk on - not the floor finish!

The Ceramic particles used in all WearMax Ceramic finishes are considered the second hardest material known to man. There is only one substance that is harder - the natural diamond! The ceramics used in WearMax are even harder than industrial diamonds and stainless steel! WearMax Technology provides superior wear resistance, superior scratch resistance and excellent slip resistance as well.  

- Water based
- Environmentally safe
- Very low 80 VOC
- Taber abrasion rating of 6,350
- 2 year commercial wear through warranty
- Lifetime residential wear through warranty
- Great slip resistance (ASTM: C1028 rating of 0.90 dry and 0.71 wet)
- Fire rating of class A; for flame spread, melt rate and smoke density
- Compatible with most existing surfaces
